

Maksim Potapov, Software Engineer / .NET Developer

Profile

Dedicated software developer with four years of experience and a track record of earning two promotions for exceptional contributions. A committed and proficient .NET developer currently excelling as a senior software developer at T8 in Moscow. Played pivotal roles in designing and launching innovative CAD software for optical network design and document automation, leading to significant improvements in project design efficiency and software reliability. Strong commitment to continued learning and growth in the field of software development.

Employment History

Senior Software Developer at T8, Moscow

October 2019 — Present

- Successfully designed, developed, and executed CAD software application for the design of fiber optics networks, automated proposal documents, web applications, and micro-services; increased design efficiency by 40% and reduced project timelines by 25%.
- Led the effort to ensure the outstanding performance of our software through active involvement in field testing, thus ensuring its effectiveness and reliability, which led to a remarkable 45% reduction in bug reports and a substantial 20% enhancement in overall reliability.
- Demonstrated leadership skills by providing training and effectively supervising junior engineers and new departmental hires, resulting in their rapid proficiency in software development, resulting 60% improvement in overall team productivity.
- Collaborated in the development of optical systems and communication networks, involving the creation of technical solutions, intricate mathematical calculations, the preparation of compelling commercial proposals, and the essential project documentation.
- Actively took part to the enhancement of methodologies and guidelines for designing communication systems and networks, specifically tailored to the telecommunications equipment manufactured by the Company. This initiative resulted reducing project design time in a 20%, strengthening the company's competitive edge in the industry.
- Supported employees across various departments involved in planning and executing the Company's telecommunications projects, with a strong focus on addressing issues related to the developed software. Through this support, I achieved a 20% reduction in project downtime, 50% increase in software issue resolution speed, contributing to the successful and timely completion of critical projects.

Education

Master of Technology, Vladimir state university, Vladimir

September 2013 — August 2019

Automation control and informatics.
